

DENISON HYDRAULICS Pressure Reducer Valve R4R Proportional Pressure Reducer Valve R4R....P2

Publ. 3-EN 2700-B, replaces 3-EN 2700-A

FEATURES

FEATURES, SYMBOL

- High Performance: R4 valves are designed for a maximum pressure of 350 bar and a flow capacity ranging from 90 I/min (³/₈") to 600 I/min (1¹/₄").
- Sensitive Control: The DENISON poppet design delivers the minimum possible friction, superior hysteresis and optimum response to changes in operating conditions.
- Wide Selection: In addition to the various mounting options for the main valve body, or as cartridge for manifold applications, the ordering code offers a range of control options for valves and accessories. A solenoid vent valve is available (VV01).
- Standardized Mounting: Mounting configurations for R4 Pressure Controls are in accordance with international standards, and conform to CETOP-RP 121 H, ISO6264. Vent valve option allows for remote pressure control.

SYMBOL R4R...P2

DESCRIPTION

GENERAL	DENISON Pressure Valves are pilot operated controls consisting of two or three sections; either a high flow, poppet type seat valve section controlled by the low flow, adjustable pilot mounted on top or in the case of the Proportional Pressure Reducer Valve, the proportional section P2 sandwiched between the pilot stage and the main body.
	R4R Reducer Valves are used to control the pressure in the secondary part of a hydraulic circuit, and to maintain this pressure as set by the control knob on the pilot, or according to the current input on the R4R \dots P2.
	The R4R can be vented electrically by means of an optional vent valve, VV01. This valve is mounted between the pilot valve and the main body.
	With the DENISON combined Seat Valve and Pilot design, and the range of springs available, it is possible to achieve extremely precise pressure setting.
	All valve components are subject to rigorous quality control, based on inter- national standards, thus permitting worldwide operation and interchangeable spare parts.
OPERATION	With the secondary Port A unpressurized, the system pressure in Port B is applied to the mini flow control valve of the pilot valve, to the pilot cone and seat (where present also to the cone of the proportional pilot valve), and to the top surface Z of the main poppet, which is held against the seat from the bottom side by the comparatively weak spring force.
	Below the setting pressure the pressure on Z lifts the main poppet downwards off its seat and allows flow from Port B to Port A.
	If the pressure in A exceeds the set point, the pressure in Z increases also to the setting pressure and the pilot cone is lifted from its seat, releasing a small pilot flow to tank $^{1)}$.
	This allows the pressure at the top of the main poppet to remain at the set point.
	In the resulting float position only enough flow is passed from B to A to maintain the outlet pressure in A, as determined by the pilot head setting.
	If and when the pressure in the secondary Port A equals the pilot stage setting, the main poppet closes. The small check valve in the main poppet prevents the secondary system from exceeding the pilot setting by allowing excess pressure to drain. This relief function has a very limited flow capacity up to 5 l/min.
1)	The proportional valve P2 varies the pressure applied to the top of the main poppet, in proportion to the current input to the solenoid. The manual setting of the pilot stage determines the maximum pressure and should be approximately 10% higher than the max. adjustable pressure of the proportional section (see also page 12).

	TECHNICAL DATA			
GENERAL	DesignType of mounting	Poppet type Threaded body Subplate mounting Cartridge		
	Port sizes	³ /8", ³ /4", 1 ¹ /4" nominal		
	 Mounting position 	optional		
	Direction of flow	B→A		
	 Ambient temperature range Suitability for special working conditions 	Consult DENISON		
HYDRAULIC CHARACTERISTICS	 Operating pressure range 			
	 inlet (port B primary) 	0350 bar		
	- outlet (port A secondary)	0350 bar

Drain Line

Screws for additional proportional section installation 4 x $^{3}/_{8}$ "-24 UNF x $3^{1}/_{2}$ " Ig., order no. 359-15340-0.

Note:

For full details of the proportional section refer to bulletin 3-EN 2200.

For additional installation with pilot operated control valves please consult DENISON.

Weight (VV01): 1.7 kg

Screws for additional vent valve installation 4 x $^3/\epsilon^{\prime\prime}\text{-}24$ UNF x $3^1/2^{\prime\prime}$ Ig., order no. 359-15340-0.

Symbols: R4R Reducer Valve with Vent Valve VV01

Note:

For full details of the vent valve VV01 refer to bulletin 3-EN 215.

Type of Control-Code 2 Hand knob 50 mm dia. (not for version with vent valve VV01 or P2)

Type of Control-Code 3 Acorn nut with lead seal

140

Type of Control-Code 4 Adjusting device with key lock. Key must be ordered separately, order-no. 700-70619-8
