

## Proportional Directional Control Valves

K(A)DG5V-5/7/8 & KDG5V-10, 1\* Series,  
 Two-Stage Models without Electrical Feedback  
 ISO 4401 Sizes 05, 07, 08 and 10 ANSI/B93.7M-D07/08/09

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet, the Installation Wiring Practices for Vickers Electronic Products leaflet 2468 and leaflet 02-123931A which is packed with every KA valve. Wiring practices relevant to this Directive are indicated by  Electromagnetic Compatibility (EMC).

# Introduction

Vickers KDG5V-5/7/8/10 are solenoid operated directional control non-feedback type proportional valves.

Two-stage proportional directional control valves in which the main-stage spool is positioned according to the output from an integrally mounted proportional, solenoid-operated, pressure-reducing valve. Direction of main-spool travel depends upon which of the two solenoids of the pilot valve is energized and the amount of travel is dependent upon the current input to the solenoid.

At any intermediate position of the main spool, a force balance exists between the controlled, reduced pilot pressure acting on the spool end and the opposing centering spring, plus the action of flow forces. There is no electrical feedback of the main-stage spool position.

This range of valves offers effective and economic solutions for applications having repetitive load conditions throughout each operating cycle, e.g. mold closure/opening in plastics molding machinery.

Valve sizes 5,7 & 8 are available with integral amplifiers.

## Features and Benefits

- These global products, manufactured to world-class quality standards, are sold and serviced throughout the world.
- These valves open up expanded application opportunities as a cost effective alternative to feedback-type proportional and servo valves.
- Vickers flexible design approach provides a wide variety of matching electronic amplifiers, valve options, and spool ratings.

Plug connector type to ISO 4400 (DIN 43650). For coil characteristics see "Operating Data" table (page B.7):  
 U-G = For use with amplifier with 12V DC supply  
 U-GP = For use with 12V power  
 U-H = For use with amplifier with 24V DC supply  
 U-HA = For use with 24V power plug  
 U-HR = For use with 800 mA power supply  
 F-PD7 = 7-pin connector with plastic plug.  
 See warning note below

**14 Pilot drain pressure**

1 = Standard  
 (See Pilot Drain Application Notes, page B.9)

**15 Design number, 10 series**

Subject to change. Installation dimensions unaltered for design numbers 10 to 19 respectively.

**16 Special features**

EN47 used with P type coil connection and Uniplug connector.  
 Omit if not required

**Warning**

To conform to the EC Electromagnetic Compatibility directive (EMC) this KACG valve must be fitted with a metal 7-pin plug. The screen of the cable must be securely connected to the shell of the metal connector. A suitable IP67 rated connector is available from Vickers, part no. 934939. Alternatively a non IP67 rated connector is available from ITT-Cannon, part no. CA 02 COM-E 14S A7 P. The plastic plug, part number 694534, is only suitable for use in a sealed electromagnetic environment or outside of the European Community.

# Spool Data

## Spool Symbols

Simplified symbols including transient flow conditions (dotted line).

Spool type 2C

Spool type 7C

Spool type 12C

Spool type 33C

Spool type 133C, with typical regenerative circuit

## Spool Types and Flow Ratings

### Symmetric Spools

Flow ratings for flow through P-A-B-T at  $\Delta p = 5$  bar (72 psi) per flow path, e.g. P-A, or B-T. For other pressure drop values see "Flow Gain" curves on page B.10.

Spool code	Main stage spool symbol	Flow rating
For K(A)DG5V-5 valves:		
2C90N	2C	90 L/min (24 USgpm)
33C80N	33C	80 L/min (21 USgpm)
For K(A)DG5V-7 valves:		
2C180N	2C	180 L/min (48 USgpm)
33C170N	33C	170 L/min (45 USgpm)
For K(A)DG5V-8 valves:		
2C280N	2C	280 L/min (74 USgpm)
33C270N	33C	270 L/min (71 USgpm)
For KDG5V-10 valves:		
2C550N	2C	550 L/min (145 USgpm)
7C550N	7C	550 L/min (145 USgpm)
12C550N	12C	550 L/min (145 USgpm)
33C550N	33C	550 L/min (145 USgpm)
133C550N	133C	550 L/min (145 USgpm)

### Asymmetric Spools

Figure preceding metering type designator, "N" (e.g. 2C\*\*\*N) is flow rating P-A, or A-T ("A" port flow); figure after "N" (N\*\*\*) is flow rating P-B, or B-T ("B" port flow).

Spool code	Main stage spool symbol	Flow rating
For K(A)DG5V-5 valves:		
2C70N45	2C	70 L/min (18.5 USgpm), "A" port flow 45 L/min (12 USgpm), "B" port flow
For K(A)DG5V-7 valves:		
2C180N100	2C	180 L/min (48 USgpm), "A" port flow 100 L/min (26 USgpm), "B" port flow
For K(A)DG5V-8 valves:		
33C250N170	33C	250 L/min (66 USgpm), "A" port flow 170 L/min (45 USgpm), "B" port flow
133C250N170	133C	250 L/min (66 USgpm), "A" port flow 170 L/min (45 USgpm), "B" port flow
For KDG5V-10 valves:		
2C310N550	2C	310 L/min (82 USgpm), "A" port flow 550 L/min (145 USgpm), "B" port flow
2C550N310	2C	550 L/min (145 USgpm), "A" port flow 310 L/min (82 USgpm), "B" port flow
33C310N550	33C	310 L/min (82 USgpm), "A" port flow 550 L/min (145 USgpm), "B" port flow
33C550N310	33C	550 L/min (145 USgpm), "A" port flow 310 L/min (82 USgpm), "B" port flow

# Operating Data

Data is typical:  
 With fluid at 36 cSt (168 SUS) and 50°C (122°F).  
 Using recommended Vickers amplifier to drive KDG5V models.

# Performance Characteristics

Data is typical with fluid at 36 cSt (168 SUS) and 50°C (122°F), using Vickers recommended amplifier to drive KDG5V models.

## Minimum Pressure

For full flow performance pilot pressure  $\geq 45$  bar (650 psi), i.e.:  
 Pressure at port P for internal pilot supply ("X" or omit in model code).  
 Pressure at port X for external pilot supply ("E" or "EX" in model code).

## Pilot Drain Application Notes

External pilot drain is to recommended configuration.  
 Internal pilot drain is possible where a stable "T" port pressure, not exceeding 8 bar (116 psi), can be guaranteed.

Any pressure surges at the "T" port (drain) will cause the main spool to move and change the valve output. This possibility is eliminated by the use of an external drain.

## Maximum Pressures, bar (psi)

### For models without integral pilot pressure reducer

Model	Pilot Pressure Source	Model code <input type="checkbox"/>	P,A,B	Ports		
				T	X	Y•
KDG5V-5	External	E	315 (4500)	210 (3000)	200 (2900)	8 (116)
	Internal	Omit	200● (2900)	210 (3000)	◆	8 (116)
KDG5V-7/8	External	E	350 (5000)	350 (5000)	200 (2900)	8 (116)
	Internal	Omit	200● (2900)	350 (5000)	◆	8 (116)
KDG5V-10	External	E	350 (5000)	350 (5000)	210 (3000)	8 (116)
	Internal	Omit	200 (2900)	350* (5000)	◆	8 (116)

### For models with integral pilot pressure reducer

KDG5V-5	External	EX	315 (4500)	210 (3000)	315 (4500)	8 (116)
	Internal	X	315 (4500)	210 (3000)	◆	8 (116)
KDG5V-7/8	External	EX	350 (5000)	350 (5000)	315 (4500)	8 (116)
	Internal	X	315● (4500)	350 (5000)	◆	8 (116)
KDG5V-10	External	EX	350 (5000)	350* (5000)	315 (4500)	8 (116)
	Internal	X	315 (4500)	350 (5000)	◆	8 (116)

- ◆ When using internal pilot pressure, port X should be plugged at the subplate or manifold face (e.g. manifold not drilled for connection to port X).
- The maximum pressure for ports A and B is: 315 bar (4500 psi) for size 5; 350 bar (5000 psi) for sizes 7, 8 and 10.
- See "Pilot Drain Application" note.
- \*—Pilot must be externally drained, otherwise "Y" port pressure applies.

Cast iron 13 (28.6)		EDGVM-8Y/8Z	350 bar (5000 psi)

## General Description

When a subplate is not used, a machined pad must be provided for valve mounting. Pad must be flat within 0,127 mm (.0005 inch) and smooth within 1,6  $\mu\text{m}$  (63 microinch). Mounting bolts, when provided by customer, should be SAE grade 7 or better.

### Dimensional Tolerances

Dimensional tolerance on interface drawings is  $\pm 0,2$  mm ( $\pm 0.008$ " ) except where otherwise stated.

ISO 4401 specifies inch conversion to  $\pm 0.01$ ".

### Conversion from Metric

ISO 4401 gives dimensions in mm. Inch conversions are accurate to 0.01" unless otherwise stated.

### Mounting Bolt Tappings

ISO 4401 gives metric thread tappings. Alternate UNC tappings are Vickers

recommendations that allow these plates and associated valves to be used up to their maximum pressures, when using Vickers recommended bolt kits, or bolts of an equivalent strength (see page B.38). It is recommended that Customer's own manifold blocks for UNC bolts should be tapped to the minimum depths given in the footnotes.

## Installation Dimensions

### DGMA-5-B-1\* Blanking Plate

**DGMA-5-C\*-1\***  
**Crossover Plate**

Model	Dimension A	Dimension B
DGMA-5-C1-1*	25,0 (1.0)	40,0 (1.6)
DGMA-5-C2-1*	40,0 (1.6)	25,0 (1.0)

**DGMA-5-T1-1\*-B**  
**Tapping Plate**  
**Ports A and B**

Ports A and B are tapped M12 x 14 (0.55) deep (e.g. for orifice plugs) on opposite face to sealplate.

**DGMA-5-T2-1\*-B**  
**Tapping Plate**  
**Ports P and T**

Ports P and T<sub>A</sub> are tapped M12 x 14 (0.55) deep (e.g. for orifice plugs) on opposite face to sealplate.

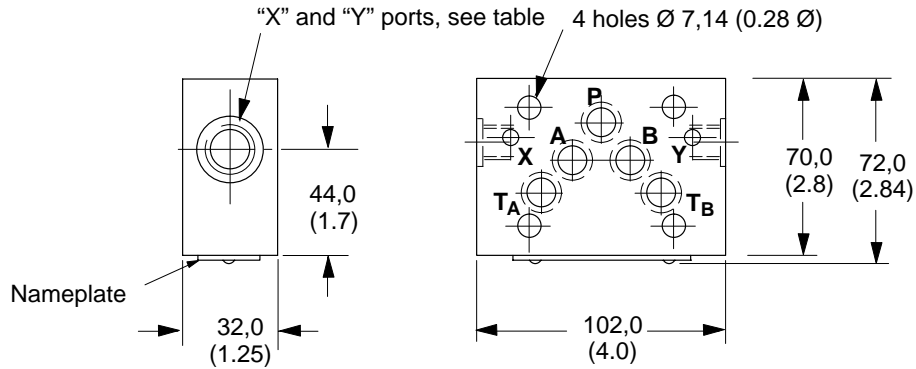

**DGMA-5-T3-1\*-B**  
**Tapping Plate**  
**Ports P, A and B**

Ports P, A and B are tapped M12 x 14 (0.55) deep (e.g. for orifice plugs) on opposite face to sealplate.

**DGAM-5-1\*-\* , X and Y  
Port Adaptor Plates**

Provides for external connections to additional pilot ports X and Y when these ports are not present in subplate/manifold block. Typically used for two-stage directional and proportional valves.

Model	"X" and "Y" port thread
DGAM-5-1*-R	G1/4 (1/4" BSPF x 11,0 (0.43) full thread depth
DGAM-5-1*-S	9/16"-18UNF x 12,7 (0.5) full thread depth

## Mounting Surface

This interface conforms to:  
 ISO 4401-07-06-0-94  
 ANSI/B93.7M (and NFPA) size 07  
 CETOP R35H4.3-07  
 DIN 24340 Form A16

## Mounting Surface

This interface conforms to:  
 ISO 4401-08-07-0-94  
 ANSI/B93.7M (and NFPA) size 08  
 CETOP R35H4.3-08  
 DIN 24340 Form A25

## Mounting Surface

Dimensions are show in mm (inches) ▲

A machined pad must be provided for mounting.

- Required for 'D' Pressure Centered models only

### Mounting Bolt Tapping Options

ISO/DIS 4401-02-02 defines only M5 tapping.  
Inch tapping options are as available in Vickers subplates and manifolds.

- ▲ ISO 4401 gives dimensions in mm. Inch conversions are accurate to 0.01" unless stated.
- ▼ It is recommended that customers' own manifold blocks for UNC bolts be tapped to these minimum depths.

Thread	Min. tapping depth for subplates/manifolds in:		
	Steel	Cast Iron	Aluminum
<b>Metric</b>	12,3	12,3	12,3
M5-6H	(0.484)	(0.484)	(0.484)
<b>Inch</b>	12,6	14,9	14,9
#10-24 UNC-2B	(0.496)▼	(0.587)▼	(0.587)▼

# Electrical Information

## Plug connector (Order separately) (ISO4400/DIN 43650)

Cable diameter range . . . Ø6–10 mm (0.24–0.40)  
 Wire section range . . . . . Ø,5–1,5 mm<sup>2</sup> (0.0008–0.0023 in<sup>2</sup>)  
 Terminals . . . . . Screw type  
 Type of protection . . . . . IEC144 class IP65, when plugs are fitted correctly to the valves with the interface seals (supplied with plugs) in place.

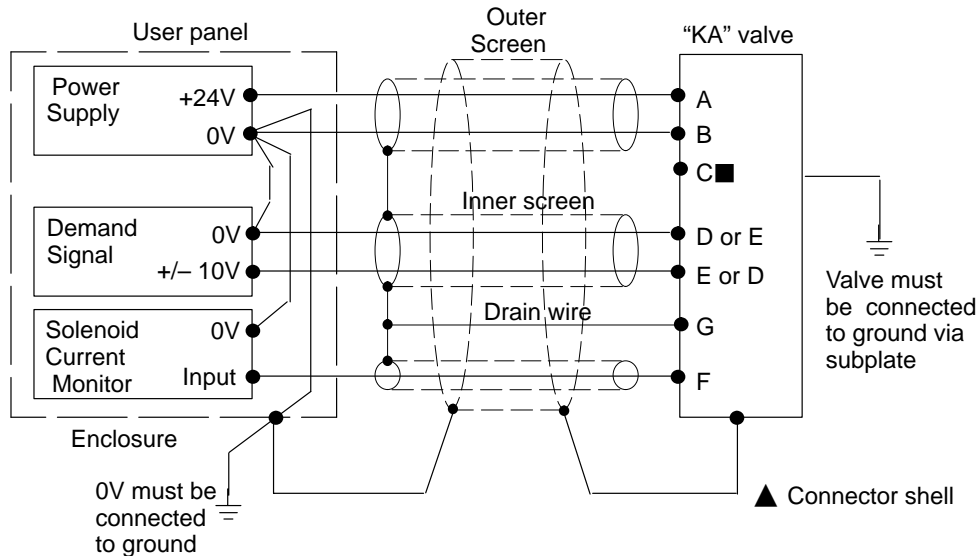

Connector can be positioned at 90° intervals on valve by re-assembling contact holder into appropriate position inside connector housing. Connectors with and without indicator lights are available (order separately).

Receptacle	Voltage (AC or DC)	Gray "A" sol.	Black "B" sol.
Without lights	—	710776	710775
With lights	12-24	977467	977466
	100-125	977469	977468
	200-240	977471	977470

# Typical Connection Arrangements

## KADG5V-5/7/8, valves with integral amplifier

■ Solenoid current monitor voltage (pin F) will be referenced to the KA valve local ground. A "local ground" (pin C) is provided for optional use by differential input customer supplied electronics.

▲ Note: In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7-pin connector and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

### Warning

Do not ground pin C. If the local ground (pin C) is not used for differential monitor electronics, do not use. Read monitor pin F with respect to ground.

### Warning

#### Electromagnetic Compatibility (EMC)

It is necessary to ensure that the valve is wired-up as above. For effective protection, the user electrical cabinet, the valve subplate or manifold, and the cable screens should be connected to efficient ground points. The metal 7-point connector, part no. 934939, should be used for the integral amplifier.

In all cases, both valve and cable should be kept as far as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.

# Electrical Block Diagram

## KADG5V5-5/7/8, valves with integral amplifier

### Wiring

Connections must be made via the 7-pin plug mounted on the amplifier.

Recommended cable sizes are:

Power cables:

For 24V supply

0,75 mm<sup>2</sup> (18 AWG) up to 20m (65 ft)

1,00 mm<sup>2</sup> (17 AWG) up to 40m (130 ft)

Signal cables:

0,50 mm<sup>2</sup> (20 AWG)

Screen:

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen. See wiring connection diagram on previous page.

### Warning

All power must be switched off before connecting or disconnecting any plugs.

## Single-Cable UNIPLUG Connector

### EHH-AMP-724 D \*\* - 1\*

Vickers UNIPLUG is a single-cable electrical connector ideally suited for economical wiring of single and double-solenoid models. It is introduced on the well-established size 3 proportional valves, KDG4V-3(S), 60 series, respectively. The UNIPLUG connector is released in four 24V versions, offering:

- Control of proportional valves from low voltage differential input signal
- Direct switching of 24V DC solenoids

The UNIPLUG connector is supplied loose for customer assembly to valves, *which must be fitted with type "P" plug-in coils.*

The correctly installed UNIPLUG/ valve combination conforms to protection code IEC 529 class IP67.

Double solenoid models

## Operating Data

Cable: wire size cable sheathing cable screening	1 mm <sup>2</sup> (18 AWG) Polyurethane Types C and D only
Ambient temperature range: operating storage	-20 to +70°C (-4 to +158°F) -25 to +70°C (-13 to +158°F)
Electro-magnetic compatibility (EMC) emission immunity	EN50081-2 EN50082-2
Protection class	IEC 529, IP67 when correctly assembled and installed on a designated valve type
Housing material	Ultramid A3 HG3

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC. For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers Electronic Products leaflet 2468. Wiring practices relative to this directive are indicated by  European Electromagnetic Compatibility (EMC)

---

### Electrical Data, Type D

Plug with proportional amplifiers with independent adjustable gain and deadband for each of two solenoid outputs, plus a common adjustable ramp.

LEDs show status of output.

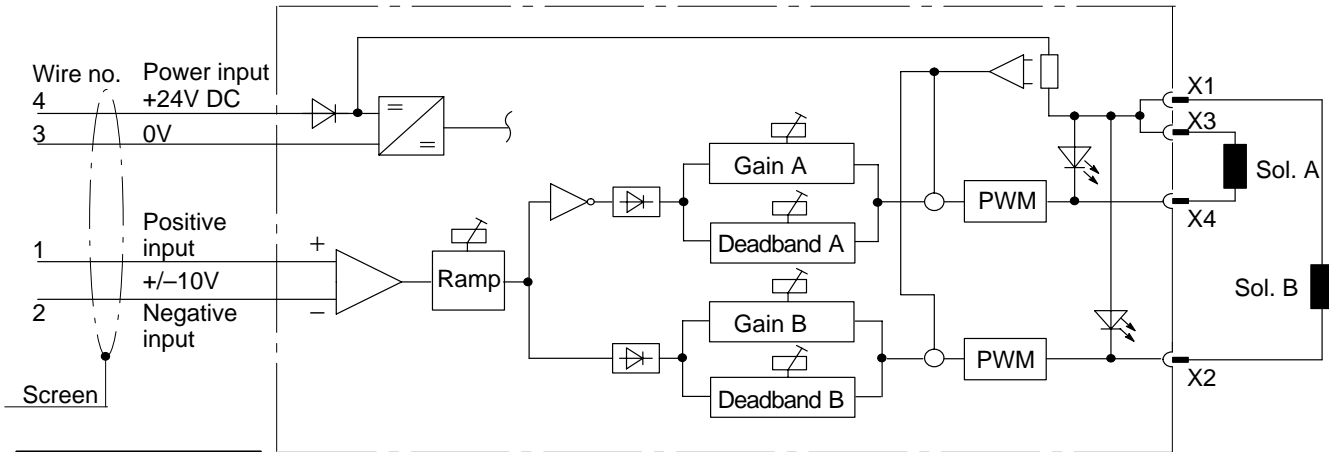

Connections (coded to DIN VDE 0293): wire no. 1 wire no. 2 wire no. 3 wire no. 4 screen	Positive command signal Negative command signal 0V (power and signal) 24V power supply Connect to a suitable ground point
Power supply (to VDE 0160) Max. permissible voltage	24V DC (20.4V to 30.4V incl. $\pm 10\%$ ripple) 36V DC <i>for less than 100 ms</i>
Protection	Reverse polarity protected Short circuit protected
Differential command signal max. command-current Input resistance Protected against overvoltage	-10V to +10V. See "Command Signal" table on next page 1 mA 10 k $\Omega$ $\pm 50$ volts
Output current per solenoid: rated max.	1.6A 1.8A
Output voltage at 1.6A output current	Typically 1.5V below supply voltage
Max. power consumption with one solenoid energized	35W
Ramp adjustment $\blacksquare$ range	50 ms to 5 sec
Deadband compensation $\blacksquare$ , independent for each solenoid Trigger level for deadband	200 to 700 mA $\pm 100$ mV
Gain adjustment $\blacksquare$ range, independent for each solenoid	0.04 to 0.14 A/V
PWM frequency	240 Hz (optimum for KD/TG4V-3(S) valves)
Installation and start-up guidelines	GB/D-9144

$\blacksquare$  *Vibration can cause potentiometer setting to change by up to approx. 5%. To avoid this effect, it is recommended to seal the adjusting screws (e.g. Loctite Screwlock 222).*

BKDG10636M (metric)  
BKDG10636 (inch)  
If not using Vickers recommended bolt kits, bolts used should be to ISO 898, 12.9 or better.

## Mounting Bolt Torques

Recommended torques with threads lubricated  
**For KDG5V-5**  
M6 or  $\frac{1}{4}$ "-20 UNC bolts:  
To 210 bar (3000 psi) 14 Nm (10.3 lbf ft)  
To 315 bar (4500 psi) 20 Nm (14.75 lbf ft)

**For KDG5V-7**  
M10 or  $\frac{3}{8}$ "-16 UNC bolts:  
49 to 59 Nm (36 to 43 lbf ft)  
plus  
M6 or  $\frac{1}{4}$ "-20 UNC bolts  
9 to 14 Nm (6.6 to 10.3 lbf ft)

**For KDG5V-8**  
M12 or  $\frac{1}{2}$ "-13 UNC bolts  
103 to 127 Nm (76 to 93 lbf ft)

**For KDG5V-10**  
M20 or  $\frac{3}{4}$ "-10 UNC-2B bolts  
185-220 Nm (250-300 lbf ft)

## Mass (Weight)

Approx. for models with integral pilot pressure reducing module ("X" or "EX"see mode code).  
KDG5V-5 9,5 kg (21 lb)  
KDG5V-7 11,5 kg (25.3 lb)  
KDG5V-8 20,2 kg (44.5 lb)  
KDG5V10 54,5 kg (120.0 lb)  
For models without integral pressure reducing module (No symbol, or "E", see model code), deduct 1,2 kg (2.6 lb).

# Application Data

## Fluid Cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Essential information on the correct methods for treating hydraulic fluid is included in Vickers publication 561; "Vickers Guide to Systemic Contamination Control," available from your local Vickers distributor or by

contacting Vickers, Incorporated. Recommendations on filtration and the selection of products to control fluid condition are included in 561.

Recommended cleanliness levels, using petroleum oil under common conditions, are based on the highest fluid pressure levels in the system and are coded in the chart below. Fluids other than petroleum, severe service cycles or temperature extremes are cause for adjustment of these cleanliness codes. See Vickers publication 561 for exact details.

Vickers products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed below. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

Product	System Pressure Level bar (psi)		
	<70 (<1000)	70-210 (1000-3000)	210+ (3000+)
Vane Pumps – Fixed	20/18/15	19/17/14	18/16/13
Vane Pumps – Variable	18/16/14	17/15/13	
Piston Pumps – Fixed	19/17/15	18/16/14	17/15/13
Piston Pumps – Variable	18/16/14	17/15/13	16/14/12
<b>Directional Valves</b>	<b>20/18/15</b>	<b>20/18/15</b>	<b>19/17/14</b>
Pressure/Flow Control Valves	19/17/14	19/17/14	19/17/14
CMX Valves	18/16/14	18/16/14	17/15/13
Servo Valves	16/14/11	16/14/11	15/13/10
Proportional Valves	17/15/12	17/15/12	15/13/11
Cylinders	20/18/15	20/18/15	20/18/15
Vane Motors	20/18/15	19/17/14	18/16/13
Axial Piston Motors	19/17/14	18/16/13	17/15/12
Radial Piston Motors	20/18/14	19/17/13	18/16/13

## Hydraulic Fluids

Materials and seals used in these valves are compatible with antiwear hydraulic oils, and non-alkyl-based phosphate esters. The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

## Fluid Temperatures

For mineral oil:

Min. . . . . -20°C (-4°F)

Max. \* . . . . +70°C (+158°F)

\* *To obtain optimum service life from both fluid and hydraulic system, 65°C (150°F) normally is the maximum temperature.*

Whatever the actual temperature range, ensure that viscosities stay within viscosities specified in the "Hydraulic Fluids" section.
