Electrical connections, plug-in connector	6
Integrated control electronics	7
Characteristic curves	8 to 13
Unit dimensions	14 and 17

Features

- Direct operated high response directional control valve for the control of the size and direction of a flow
- Valve spool and bush are of servo quality
- Suitable for closed loop, position, speed and pressure control
- Operated via high response solenoids
- With fail-safe position for the 4/4 high response directional control valve
- Electrical position feedback
- High response sensitivity and low hysteresis
- Integrated control electronics with interface A1 or F1
- For subplate mounting:
Porting pattern to DIN 24 340 form A, ISO 4401
and CETOP-RP 121 H
Subplates to catalogue sheets RE 45 052 and RE 45 054 (separate order), see pages 14 to 17

Ordering details

4WRS E H -3X /G24 KO / V *

With **integrated** control electronics = **E**
 Control spool/bush = **H**
 Nominal size 6 = **6**
 Nominal size 10 = **10**

Symbols

4/3-way version

4/4-way version

Inductive position transducer location with spool symbol „V”

Inductive position transducer location with spool symbols „C3” and „C4”

Further details in clear text

V = FKM seals, suitable for mineral oils (HL, HLP) to DIN 51 524 and phosphate ester (HFD-R)

Control electronics interface

A1 = Command value input ± 10 V
F1 = Command value input 4 to 20 mA

Electrical connections

K0 = With component plug to E DIN 43 563-AM6
Without plug-in connector, Plug-in connector – separate order, see page 6

Control electronics power supply

G24 = + 24 V DC

3X = Series 30 to 39 (30 to 39: unchanged installation and connection dimensions)

Spool overlap ⁴⁾

E = 0...0.5% negative
D = 0...0.5% positive

Flow characteristics

L = Linear
P = Inflected characteristic curve 40 %

Nominal flow at a 70 bar pressure differential

Nominal size 6

04 = ³⁾ 4 L/min
12 = 12 L/min
24 = 24 L/min
40 = ²⁾ 40 L/min
50 = ¹⁾ 50 L/min

Nominal size 10

50 = 50 L/min
100 = 100 L/min

- 1) Only with „V” in conjunction with flow characteristic „L”
- 2) Only with „C” and „V” in conjunction with flow characteristic „P”
- 3) Only in conjunction with flow characteristic „L”
- 4) The spool overlap in % relates to the nominal stroke of the control spool. We recommend, for closed loop applications, the D overlap. Further spool overlaps on request!

Type 4WRSEH.C.B...-3X/...

Type 4WRSEH.C...-3X/...

Function, section

The 4/3 and 4/4 high response directional control valves are designed as direct operated units of subplate mounting design. They are operated by high response solenoids. The solenoids are controlled via the integrated control electronics.

Design:

The valve basically comprises of:

- Housing (1) with mounting surface
- Control spool (2) in bush (3) with compression springs (4 and 5)
- Solenoids (6 and 7)
- Position transducer (8)
- Integrated control electronics (9)
- Zero point adjustment accessible (10) via Pg9

Functional description:

4/3-way version

- With solenoids (6 and 7), de-energised the control spool (2) is held in its mechanical centre position by the compression springs (4 and 5)
- Direct operation of the control spool (2) by the energisation of one of the high response solenoids
E.g. control of solenoid "b" (7)
 - Moves the control spool (2) to the left in proportion to the electrical input signal
 - Connection from P to A and B to T via orifice type cross-sections with linear or inflected flow characteristics
- By de-energising the solenoid (7) → control spool (2) is returned to its centre position via the compression spring (4)

In the de-energised condition the control spool (2) is held in a mechanical centre position via the control springs. This does not relate to the hydraulic centre position!

By closing the electrical valve closed loop circuit and the command value is 0 (0 V at A1 or 12 mA at F1) then the control spool (2) is positioned in the hydraulic centre position.

Type 4WRSEH 10 V...-3X/...

Function, section

4/4-way version

The function of these valves is basically the same as the 4/3-way version. However, when the solenoid is de-energised the control spool is moved into a fail-safe position via a compression spring.

The 4/4 high response directional control valves are designed as direct operated units of subplate mounting design. They are operated by high response solenoids. The solenoids are controlled via the integrated control electronics.

Design:

The valve basically comprises of:

- Housing (1) with mounting surface
- Control spool (2) in bush (3) with compression springs (4)
- Solenoid (5) and cover (6)
- Position transducer (7)
- Integrated control electronics (8)
- Zero point adjustment accessible (9) via the Pg9

Functional description:

- With the solenoid (5) de-energised, a fail-safe position for the control spool (2) via compression spring (4) results
- Direct operation of the control spool (2) by the energisation of the high response solenoid (5)

E.g. control of the solenoid

- Moves the control spool (2) in proportion to the electrical input signal
- Connection from P to A and B to T via orifice type cross-sections with linear or inflected flow characteristics
- By de-energising the solenoid (5) → the control spool (2) is moved back into the fail-safe condition via the compression spring (4)

Type 4WRSEH 10 VC...-3X/...

Control electronics	VT 13070 (integrated into the valve, see page 7)							

 **Note:** For details regarding the **environmental simulation test** covering EMC (electro-magnetic compatibility), climate and mechanical loading see RE 29 069-U (declaration regarding environmental compatibility).

Electrical connections, plug-in connector

Plug-in connector

Plug-in connector to E DIN 43 563-BF6-3/Pg11

Separate order under material No. **00021267** (plastic version)

For pin allocation see block circuit diagram on page 7

Plug-in connector

Plug-in connector to E DIN 43 563-BF6-3-Pg13.5

Separate order under material No. **000223890** (metal version)

For pin allocation see block circuit diagram on page 7

Component plug allocation

	Contact	Signal
Supply voltage	A	24 VDC ($u(t) = 19.4 \text{ V to } 35 \text{ V}$); $I_{\text{max}} = 2 \text{ A}$ (NS 6) $I_{\text{max}} = 2.8 \text{ A}$ (NS 10); impulse load = 4 A
	B	0 V
Ref. (actual value)	C	Ref. potential for actual value (contact F); A1: $R_e > 50 \text{ k}\Omega$ F1: $R_e < 10 \text{ }\Omega$
Differential amplifier input (command value)	D	A1: $\pm 10 \text{ V}$ command value, $R_e > 50 \text{ k}\Omega$ or F1: 4...20 mA, $R_e > 100 \text{ }\Omega$
	E	0 V ref. potential
Measurement output (act. value)	F	$\pm 10 \text{ V}$ actual value (limiting load 2 mA); or F1: 4...20 mA, max. load impedance 500 Ω
	PE	Connected with cooling body and valve housing

Actual value: Interface A1: A positive signal at F and the reference potential at C results in a flow from P to A.

Note for A1: Connect pin C on the control side (star form) with \perp .

Interface F1: 12...20 mA results in a flow from P to A.

Command value: A positive command value at D (interface A1) or 12...20 mA (interface F1) and the reference potential at E results in a flow from P to A and B to T.

A negative command value at D (interface A1) or 12...4 mA (interface F1) and the reference potential at E results in a flow from P to B and A to T.

Connection cable: Recommended: – up to 25 m cable length type LiYCY 7 x 0.75 mm²
– up to 50 m cable length type LiYCY 7 x 1.0 mm²

Outside diameter 6.5 to 11 mm

Only connect the screen to \perp on the supply side.

Integrated control electronics VT 13070

Block circuit diagram / connection allocation for the integrated control electronics

VT 13070 for 4/4-way version

- 1) Connection PE is connected with the cooling body and the valve housing 3) Output stage, current controller
 2) **Note for A1:** Connect pin C on the control side to \perp 4) Zero point externally adjustable

Note: Electrical signal (e.g. actual value) taken via valve electronics must not be used to switch off the machine safety functions!
 (This is in accordance with the regulations to the European standard "Safety requirements of fluid technology systems and components – hydraulics", EN 982!)

Pressure-signal-characteristic curve $p_s = 100 \text{ bar}$
